2. Formulas and Series

\frown	-
	period in
8040B	[]
	_
-	

In this chapter you will learn how to automatically complete a series of numbers, dates, or other items and work with more complex formulas in *Excel*. You will notice that creating an *Excel* data model is sometimes quite a considerable task. Therefore, these models are best used for regularly recurring calculations, such as monthly summaries or cost breakdowns.

The big advantage of a calculation model in *Excel* is that you can immediately see what the consequences are if the values change. For instance, you can view what happens if you implement a price increase or a cost savings without having to recalculate the figures all over again.

In this chapter you will learn:

- how to copy a worksheet;
- how to automatically complete a sequence of months;
- what an absolute reference is;
- how Excel calculates;
- how to change the order of operation in a calculation;
- how to link cells to other worksheets;
- how to calculate a percentage;
- how to change cells into hyperlinks;
- how to protect worksheets;
- how to create unprotected cells;
- how to change the default settings of a workbook;
- how to set the number of worksheets;
- how to create a date series;
- how to create a series of weekdays;
- how to add your own series.

2.1 Copying a Worksheet

In the following exercise, you will need to open the practice file called *Telephone costs*:

Save it first

Try to make a habit of first saving original workbooks with a different name before you change them. In case anything goes wrong while working on the workbook, you can always revert to the original. This also prevents you from overwrite the original if you accidentally use *Save* instead of *Save As*.

First copy this worksheet to two new worksheets so that you can calculate the data of two other providers in those sheets:

©2017 Visual Steps™ - This is a sample chapter of the Visual Steps book Textbook MOS Excel 2016 and 2013 + Extra Exercises – ISBN 978 90 5905 733 3.

	Go to the Sheet1	1	A	1 3	B	C Tele0	all	E I		G	н	1	J	к	L	м	N	0	-

		Rea	aly T	leCal	I Bel	Abo Te	riestunt	÷					•		[81] 1	18-		+ 10	9 0%

2.2 AutoFill

Excel can automatically complete several common sequences of data such as days and months. By typing a single day or month, *Excel* can fill in the subsequent days or months by itself. In this overview you will calculate the costs of a cell phone plan for the first half year. To do this, you can use the *AutoFill* function. This will automatically place the months February through June below January:

\bigcirc	Click cell A7 ——		A		В	С	D	E	F	G

	can see the month of	2 3 4 5 7 8 9 10 11 12	per minute per MB		0.07 <i>minu</i> 750 420 380 810 400 670		M 1200 1150 920 1110 840	В	expenses	

Release the mouse		A		В	С	D	E	F	G	
button	1				Tele	Call				
	2	Rates:								
The months have now been	3	per minute	\$	0.15						
	4	per MB	\$	0.07						
completed:	5									
	6		-	minu	utes	N	1B	expenses		
	7	January		750		1200				
	8	February		420		1150				
	9	March		380		920				
	10	April		810		1110				
	11	May		400		840				
	12	June		670		1650				
	13	total								
	14									

You can also do the same thing by using the ribbon. To do that:

If a series has a regularity, you can use the *AutoFill* function to complete it automatically. The *Telestunt* bills are sent quarterly. In order to use *AutoFill*, you must enter at least the first two cells of the series. In this case: January and April:

R.	Go to worksheet	Telestunt 8241
----	-----------------	----------------

2.3 Absolute References

In Section 1.9 Entering Simple Formulas you learned to create simple formulas and in section 1.10 Copying Formulas you learned how to copy them. You will now calculate the call costs for the month of January by multiplying the number of minutes by the costs per minute:

Extra Exercises

Foreword

This workbook is essential in preparing for the Microsoft Office Specialist[®] exam (MOS).

Once you have worked through the first chapters of this book, you will know how to perform the necessary actions in *Excel*. However, this does not mean that all actions have been mastered. The many exercises in this book allow you to practice even further with various types of assignments or tasks.

This additional training will ensure that you have the best possible preparation for the exam!

We wish you a lot of success with the exercises in this book and with the exam.

Studio Visual Steps

How to Use This Book

This book contains exercises to prepare you for the MOS exam *Excel*. The exercises are subdivided into footsteps exercises, do-it-yourself exercises and MOS exam exercises.

Footsteps Exercise

In this type of exercise all actions are marked by a footstep icon \mathcal{G}^1 . This means the actions have already been handled earlier in the textbook. If you do not know how to perform an action, you can learn how to do so by looking for the corresponding number written next to the footstep icon in the appendix *How Do I Do That Again?* at the end of the book.

At the end of each exercise, reference is made to a file to compare the result with the program window, so you will see if you have done the exercise correctly. The final result files can be found in the practice files folder.

Do-It-Yourself Exercise

In this type of exercise, the required actions are not accompanied by the footstep icons. It is now expected that you can perform the necessary actions without the need of the footsteps. At the end of each exercise, reference is made to a file to compare the result with the program window. This will help you to see if you have done the exercise correctly.

MOS Exam Exercise

This exercise trains you through a simulation that is set on your PC. In this way, you get acquainted with how a MOS test will look like and be prepared for the test environment. At the end of the exercise, reference is made to a file to compare the result with the program window. You will be able to see right away if you have done the exercise correctly. On page 262 you can read how to do these exercises step by step.

The Website and Supplementary Materials

This book is accompanied by the website

www.visualstepsmosbooks.com/excel2016.php. The website features practice files and supplementary materials that you can download. Check the website often to see if there are any additions or errata published for this book.

Practice files

The practice files used in this book can be downloaded from

www.visualstepsmosbooks.com/excel2016-practicefiles.php. If these practice files are not yet on your computer, you will need to copy them first to your (*My*) *Documents* folder. A PDF file on the website explains how to do this. Carefully follow the instructions in the PDF file! If you do not do this, the practice files may end up in the wrong folder.

If you are working through this book at a school or other educational facility, then kindly ask your instructor where the practice files are located on the computer you are working on.

Results

The exercises in this books are accompanied by result files. You can use these files to check if you have done the exercises correctly. The result files are located in the practice files folder which can be downloaded from the web page listed above.

The MOS Exam Exercises

You can open the MOS exam exercises on the website for this book as follows:

Open the browser Edge or Internet Explorer on your desktop

Open the web page www.visualstepsmosbooks.com/excel2016-mosexamexercises.php

You will need to fill in the access code in order to open the MOS exam exercises:

\bigcirc	⁺ Click	Ø MOS exam exercises E∞ × [+	
	MOS exam exercise 1: Setting Up Excel and Basic F	Visualistepsmosbooks.com/excet2016-moe-exameserclass.php Visual Steps	Hs
		MOS EXAM EXERCISES	EXCEL
		MOS Exam Exercises Exc	el
			or Excel 2016 and 2013. In the foreword of the the workbook you can read use these exercises. Read these instructions carefully before you begin y how they work.
		Chapter 1 MOS exam exercise 1: Setting Up Excel and 8 MOS exam exercise 2: More Setting Up Excel	
		Chapter 2 MOS exam exercise 3: Formulas MOS exam exercise 4: More Formulas	
		Chapter 3 MOS exam exercise 5: Tables MOS exam exercise 6: More "ables	
		Chapter 4 MOS exam exercise 7: Analyzing Data MOS exam exercise 11: More Analyzing Data	
	Chapter 5 MOS exam exercise 9: Functions MOS exam exercise 10: More Functions		

You see the web page with the MOS exam exercises. Open an exercise:

A new web page opens. This page contains links to the source files:

- Instructions: opens a web page with instructions for the exercise.
- Final result: Opens a web page with an image of the final result of the exercise. You can compare the picture on this page with your own result at the end of the exercise.
- Climate_Rome.xlsx: This will open the *Excel* file needed for the exercise. You may also see links to additional files such as images and text files.

We recommend that you open each of these pages in a new window. Then you can place them on your computer screen in the following way:

The new window with the instructions for the exercise opens on top of the current window. Drag this window down to the left corner of your screen:

Ð	Drag the window down to the left corner of your screen	Encycle In Derycle In Derycl	$ \mathbf{x} \stackrel{\text{def}}{=} \frac{ \mathbf{x} }{ \mathbf{x} _{1} _{1} _{1} _{1} _{1} _{1} _{1} _{1$	e develaadet from <u>the melange</u>	a x 0 ···	
Redu windo	ce the size of the ow:	Instruction X + C D Instruction X + O Instruction MOS exam exercise 1: Se Workbook Open workbook Open	ting Lip Figure Ind Basic Functions			
	Place the pointer on the top right corner of the window	Call Calumens C Adjust column width We Deta	(PBg) Et minute AM proposition in allocations on column A to 16 the foot to 10 CPA 10 m m			
The p	pointer changes in 🗸 :	Color formula Color	12: sverage 82:02			
P	Press the mouse	a laws fin	x +		- 0)	
G	button	Balance In Control International Control International The exercise Heric case	visualitypenalisekaan:		⇒ N Q ·	
æ	Drag the corner of the window downwards and to the left until it is as about a quarter or less of your screen's width Release the mouse	Columns	precipitation in willingenerate			
J	button		191 30 No 49			∧ (2 0) (% <mark>10.00</mark> □

Open another window:

You see the window with a picture of the final result of the exercise. Place this window at the bottom center of your screen:

Now you can open the exercise file:

The file is downloaded from the Internet. This may take a while. At the bottom of the window a bar appears:

Allow the *Excel* window to fill the entire width of the top of your screen:

Place the window with the source files at the bottom right of your screen:

\bigcirc	Click the window	La (y) (y) (y) (x) (x) (x) (x) (x) (x) (x) (x) (x) (x	nyan a ti A bar
\bigcirc	Reduce the size of the	$ \begin{array}{ c c c c c c } \hline \hline & A & A & A & A & A & A & A & A & A$	No. P Q B S T No. P Q B S T -
	window	2 million transmer 13.8 13.8 13.8 2 million transmer 5.0 2.8 4.8 5 8 7 7	
œ	Move the window to the bottom right of the screen	terrentere	Annual Annu
		# P O E B G # H	· ~ 다 야 파 · · · · · · · · · · · · · · · · · ·

Now your screen looks almost the same as during the MOS exam. During the exam you will be expected to do the following:

- 1. Perform the actions described in the window at the bottom left side of the screen in the Excel window at the top.
- 2. If you have finished the exercise, you can compare your Excel window with the final results shown in the small window in the center of your screen.
- 3. When you are completely done you can close all windows by clicking the the top right corner of each window.

HELP! I have a small screen.

If you have a small screen, the setup as described above is not very convenient. In that case, it is better to place the *Excel* window on the left side of the screen and the instructions window on the right or vice versa. The windows will then be displayed larger.

You can minimalize the windows with the final result and the source files. They will still remain open and you just need to click the taskbar button to view them again. You can set up your screen as follows:

Please note:

You can open the necessary *Excel* files by clicking the hyperlink on the web page with the source files, such as Climate_Rome.xlsx. But you can also find these files in the practice files folder which can be downloaded from the website **www.visualstepsmosbook.com/excel2016-practicefiles.php**. It will save you some time performing the exercises, if you have these files already downloaded to your computer. For example, some exercises require insertion of an image or the retrieval of data from a text(.csv) file. It also takes a little more time to download an *Excel* file from the Internet than to open one from your computer.

2. Formulas and Series

In chapter 2 of the textbook, you learned how to work with slightly more complicated formulas and how to add series automatically. You can continue practicing these skills in this chapter.

Footsteps Exercise 2: Formulas and Series

(b) 15 minutes

Solution $Excel \mathscr{P}^1$ and open a new blank workbook. \mathscr{P}^2

Enter the following data: \mathscr{P}^{17}

	А	В	С
1	fixed costs	:	
2	rent		
3	gas, water	, light	
4	insurance		
5	total		
6			
7	variable co	osts:	
8	groceries		
9	clothing		
10	other		
11	total		
12			
13	Costs per r	month	

The change the formatting of the cells A1 and A7 to font size 14. \mathcal{P}^{28}

INFR Automatically adjust the width of the first column to the widest data. \mathscr{D}^{18}

R\$	Ente	er the following da	ta: 🔗 17	
		А	В	С
	1	fixed costs:		
	2	rent	550	
	3	gas, water, light	180	
	4	insurance	200	
	5	total		
	6			

In cell B5 add up the data from the cells B2:B4. \mathscr{P}^{22}

Insert an empty row between row 6 and 7. $\%^{30}$

In cell B7, type: January 9017

Automatically fill the cells C7:M7 with the other months. \mathcal{P}^{42}

If necessary, widen the columns until the data fits exactly. $^{\circ}$

You will only fill in the data from the first three months.

7	er the following da	January	February	March	April
8	variable costs:				
9	groceries	140	150	160	
10	clothing	30	60	90	
11	other	80	100	120	
12	total				

In cell B12 add up the data from the cells B9:B11. \Re^{22}

Solution Copy the formula from cell B12 to the cells C12 and D12. 92^{24}

Now add up the fixed and variable costs for the month of January.

In cell B14 add up the data from the cells B5 and B12. \Re^{22}

Solution Copy the formula from cell B14 to the cells C14 and D14. \mathcal{P}^{24}

Notice that the results are incorrect.

Change the reference to cell B5 in the formula in cell B14 to an absolute one. 0.38

Solution Copy the formula from cell B14 to the cells C14:D14. \mathscr{P}^{25}

The results are now correct.

In cell A15, type: percentage fixed 9/17

Now, you can calculate the percentage of fixed costs per month.

- In cell B15, enter a formula to divide cell B5 by cell B14 \mathcal{O}^{22} , where the reference to cell B5 is an absolute one. \mathcal{O}^{38}
- Solution Convert the result in cell B15 to a percentage. 92^{43}
- \mathbb{I} Copy the formula from cell B15 to the cells C15 and D15. \mathscr{P}^{25}

In cell A18, type: total costs

In cell B18 add up the data from the cells B14:D14. \mathcal{P}^{22}

R

	-
	Enter the following data: 20 March June 21 per quarter 22 I Der quarter
R\$	Select the cells B20:E20 and automatically fill the series using the ribbon with September and December. GO49
r\$	If necessary, widen the columns until the data fits exactly. \wp^{18}
r\$	Change the name of the <i>Sheet1</i> worksheet to <i>2015.</i> ^{Sol2}
Ŕ	Create a new worksheet OO11 and change the name of this worksheet to Annual costs. OO12
R\$	Place the 2015 worksheet before the Annual costs worksheet. $^{\circ}$
R\$	On the Annual costs worksheet, in cell A1 type: 2015
R\$	In cell B1, create a reference to cell B18 on the 2015 worksheet. \mathscr{P}^{44}
R\$	Convert cell A1 to a hyperlink to the 2015 worksheet. 92^{45}
R\$	Click the hyperlink to test whether it works.
R\$	Protect the 2015 worksheet. \mathscr{D}^{46}
R\$	Open the Result Footsteps Exercise 2 workbook \mathcal{P}^{36} and compare this to your own workbook.
RF.	Close the Result Footsteps Exercise 2 workbook and do not save any changes. ${}^{O}_{O}\!$
R\$	Save the workbook with the name Household Costs 1 in the (My) Documents folder. \mathcal{D}^{26}
R.	Remove the hyperlink in cell A1 on the <i>Annual costs</i> worksheet. 9947
R\$	Cancel the protection of the worksheet 2015. \mathcal{P}^{48}
R\$	Save the changes. \mathcal{D}^{40}
r\$	Close Excel. 2016

Do-It-Yourself Exercise 3: Formulas and Series

(b) 12 minutes

- Solution Content of the Costs_cell_phone.xlsx workbook from the Practice Files Workbook Excel folder.
- Automatically fill the cells A10:A20 with the other months.
- Enter a nested formula in cell C9, in which you first subtract cell C4 from cell B9 and then multiply the result by cell D4.
- Change the references to cells C4:D4 in the formula in cell C9 to absolute ones.
- Copy the formula from cell C9 to the cells C10:C20.
- Enter a nested formula in cell E9, in which you first subtract cell C5 from cell D9 and then multiply the result by cell D5.
- Change the references to cells C5:D5 in the formula in cell E9 to absolute ones.
- Copy the formula from cell E9 to the cells E10:E20.
- In cell F9 add up the data from the cells B4, B5, C9 and E9.
- Change the references to cells B4 and B5 in the formula in cell F9 to absolute ones.
- Copy the formula from cell F9 to the cells F10:F20.
- In cell A21, type: total
- In cell F21 add up the data from the cells F9:F20.
- Change the name of the Sheet1 worksheet to 2014.
- Create a new worksheet and change the name of this worksheet to *Annual summary.*
- Place the 2014 worksheet before the Annual summary worksheet.
- On the Annual summary worksheet, in cell A1 type: 2014
- In cell B1, create a reference to cell F21 on the 2014 worksheet.
- Convert cell A1 to a hyperlink to the 2014 worksheet.
- Click the hyperlink to test whether it works.
- Open the *Result Do-It-Yourself Exercise 3* workbook and compare this to your own workbook.
- Close the *Result Do-It-Yourself Exercise 3* workbook and do not save any changes.
- Save the workbook with the name *Cell Phone Costs 1* in the *(My) Documents* folder.
- Close Excel.

Do-It-Yourself Exercise 4: More about Formulas and Series

(b) 10 minutes

- Solution Content and open a new blank workbook.
- Enter the following data, ensuring the columns have the correct width:

	A	В	С
1	fixed labor costs		
2		per month	
3	Knight	1800	
4	Parker	2300	
5	Jackson	1700	
6	total		
7			
8	variable labor costs		
9			
10	Brown		
11	Rogers		
12	total		
13			

- Change the formatting of cells A1 and A8 to bold.
- In cell B9, type: January
- Automatically fill the cells C9:M9 with the other months.
- Enter the following data:

9		January	February	March	April
10	Brown	2200	1800	800	
11	Rogers	1200	900	1100	
12	total				

- In cell B6 add up the data from the cells B3:B5.
- In cell B12 add up the data from the cells B10 and B11.
- Copy the formula from cell B12 to the cells C12 and D12.
- In cell A14, type: labor costs per month
- Change the formatting of cell A14 to bold.
- In cell B14, enter a formula to add up the data from the cells B6 and B12.
- Change the reference to cell B6 in the formula in cell B14 to an absolute one.
- Copy the formula from cell B14 to the cells C14 and D14.
- **In cell A15**, **type**: variable percentage
- In cell B15, enter a formula to divide cell B12 by cell B14.
